

In this phase, you will receive payments for ecosystem services. For each hectare of forest you will receive 160 R\$ per year. For one cell you will thus receive 4'000 R\$. In the following years, the payments follow the cattle price. When the cattle price drops by 1'000 R\$, the payment drops by 6 R\$ per hectare, so 150 R\$ per cell. You will receive more when the price is high and less when the price is low.

After 25 years, the payments for ecosystem services stop. This phase will go on till 2061.

+ 4'000 R\$ / year  
 $\pm 150 \text{ R\$} / 1'000 \text{ R\$ of Cattle Price}$
